

The Command Center for the Information Environment

Most systems observe narratives. Sentr shapes them.

Sentr isolates emerging narratives and opportunities for influence, generates doctrinally grounded playbooks, and deploys targeted messaging and communications to your audience wherever it is. Command the information environment through an intuitive and agentic chat interface.

Eliminate fragmented workflows and dominate the information environment with Sentr.

IDENTIFY WHAT MATTERS

Sentr collects first party data and uses custom knowledge bases to turn raw data into meaningful action. Use the natural language chat interface to surface vulnerabilities and inflection points in the information environment. Track how narratives evolve across key geographies and user groups.

MEASURE WHAT CHANGES

Assess the impact on your target audience of your messaging and advertising campaigns using the intuitive chatbot to interrogate mission data. Track real-world deltas in public perception to measure effectiveness and refine your next steps.

PLAN FOR ADVANTAGE

Develop robust plans for actions in the IE through AI agents trained on an expert-curated doctrinal knowledge base. Accelerate planning cycles by up to 85%, turning weeks of work into hours.

SECURE + RELIABLE

Sentr operates on an expert-curated doctrinal knowledge base, ensuring answers and recommendations are consistent with role-based guardrails. It generates interactive, clickable citations for every document used, preserving an audit trail. And interactions with Sentr's LLM are never exposed to third party endpoints.

DELIVER EFFECTS

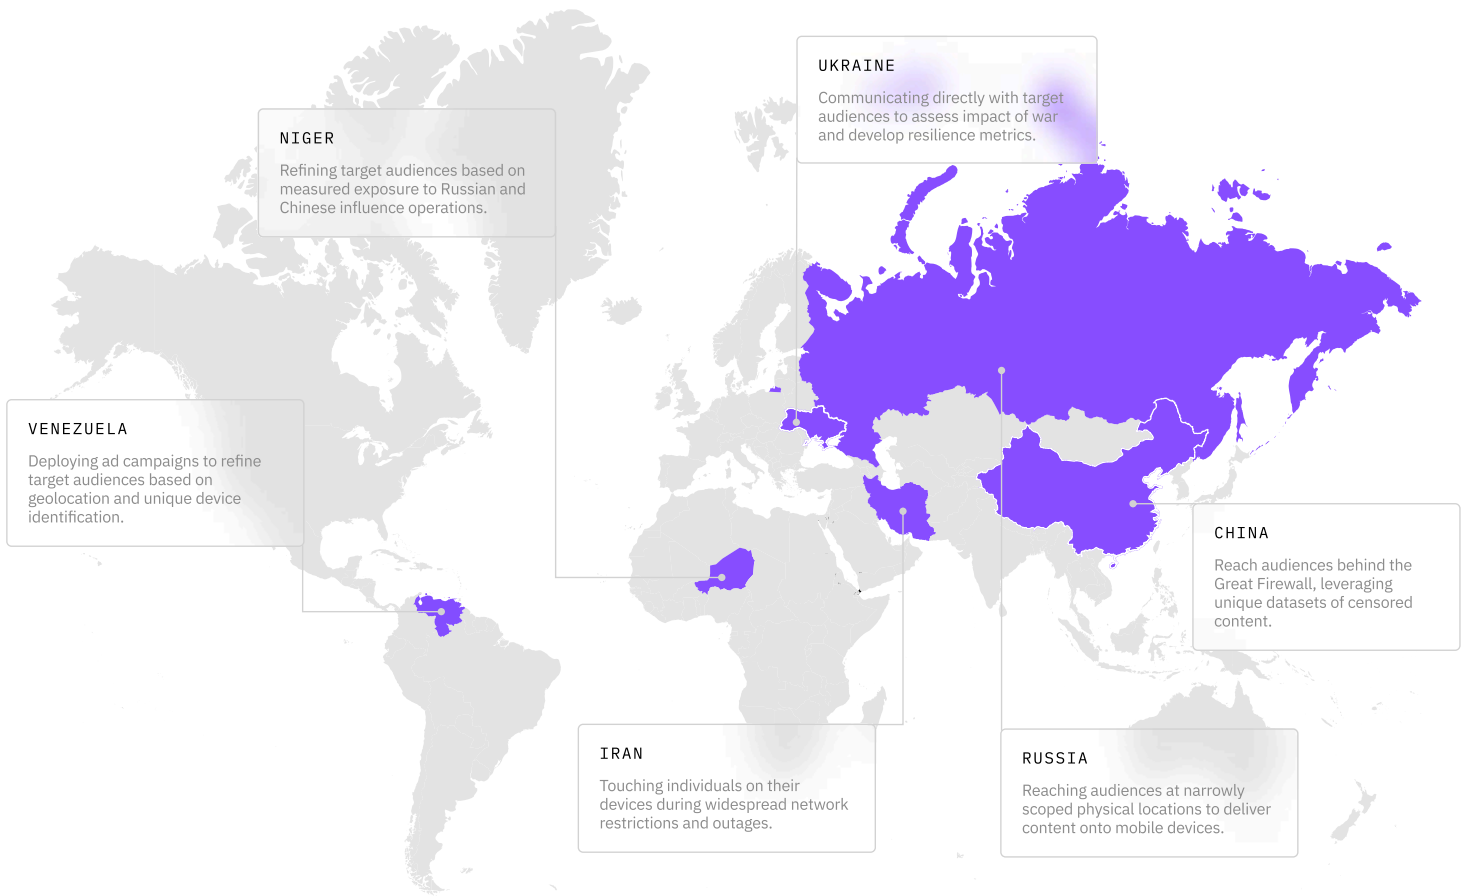

Execute targeted messaging and advertising campaigns directly onto audience devices, even within challenging or denied information environments. Shape public narratives and drive behavioral outcomes in Sentr.

SUPPORTED BY EXPERTS

Every aspect of Sentr is backed by technical and mission experts who understand the capabilities and how to apply them for your critical mission. Additional expert support is available on-site or on-call, with optional fully cleared experts.

Operational, Not Aspirational

Sentr is built on Two Six Technologies solutions that have been successfully deployed by Department of War, Department of State, and Intelligence Community customers for over a decade. Sentr is operational today, executing live information operations to secure immediate strategic dominance.

Simple Contracting + Licensing Models

Sentr executes contracts at the speed of a MIPR, leveraging a \$1+ billion contract ceiling to eliminate acquisition delays. Available via sole-source IDIQs through the Phase III SBIRs, BAA/OTAs, and R&D. Modular subscriptions scale instantly across the Department of War, Intelligence Community, and federal agencies, from small teams to large enterprises.

Flexibility to Suit Your Needs

Sentr utilizes Publicly Available Information, which allows for straightforward collaboration and sharing across the U.S. Government and with partners and allies. Secure web access eliminates deployment lag, delivering immediate user access and operational impact without software installations or integration delays.

ABOUT TWO SIX TECHNOLOGIES

Two Six Technologies is a high-growth technology company dedicated to providing products and expertise to national security customers. The company solves complex technical challenges in five focus areas that are key to national security missions: cyber, information operations, electronic systems, analytics, and secure solutions.
