

### Mission Focus

Pulse Deliver empowers content delivery to audiences worldwide on their own devices. With engagement through encrypted messaging apps, social media platforms, simple messaging services, and advertising — audiences are never out of range or reach of Pulse Deliver.

### Create an Information Advantage

Instantly connect with audiences worldwide via messages, advertisements, or surveys delivered through familiar digital communication channels, which increases the likelihood of generating authentic engagement and getting direct answers from any populace.

### No App Downloads Necessary

Our technology does not require the audience to download an app onto their device. Instead, Pulse Deliver connects with audiences through familiar digital communication channels like SMS, Encrypted Messaging apps, and Social Media messaging services facilitating connection with people in hard-to-reach places and generating authentic engagement.

### Deployable Capability

In addition to full web-based access, Pulse Deliver can operate completely disconnected through our globally deployable kits, allowing direct engagement with local audiences on local networks.

### Experts in Advertising Technology

We know how to navigate the technical ecosystem of commercial messaging and advertising. Pulse Deliver brings access to more than 100 ad exchanges with a reach into over 200 countries.

### Survey Populations Directly to Measure Impact

Conduct remote digital surveys to measure if and how narratives have moved beyond media and their impact on audiences.

### Cultural Expertise

Our team of content creators and marketing specialists provide messaging support, including graphic design and the creation of culturally informed content.

### Operational, Not Aspirational

At Two Six Technologies, the Pulse Deliver team has a strong track record of delivering mission value.

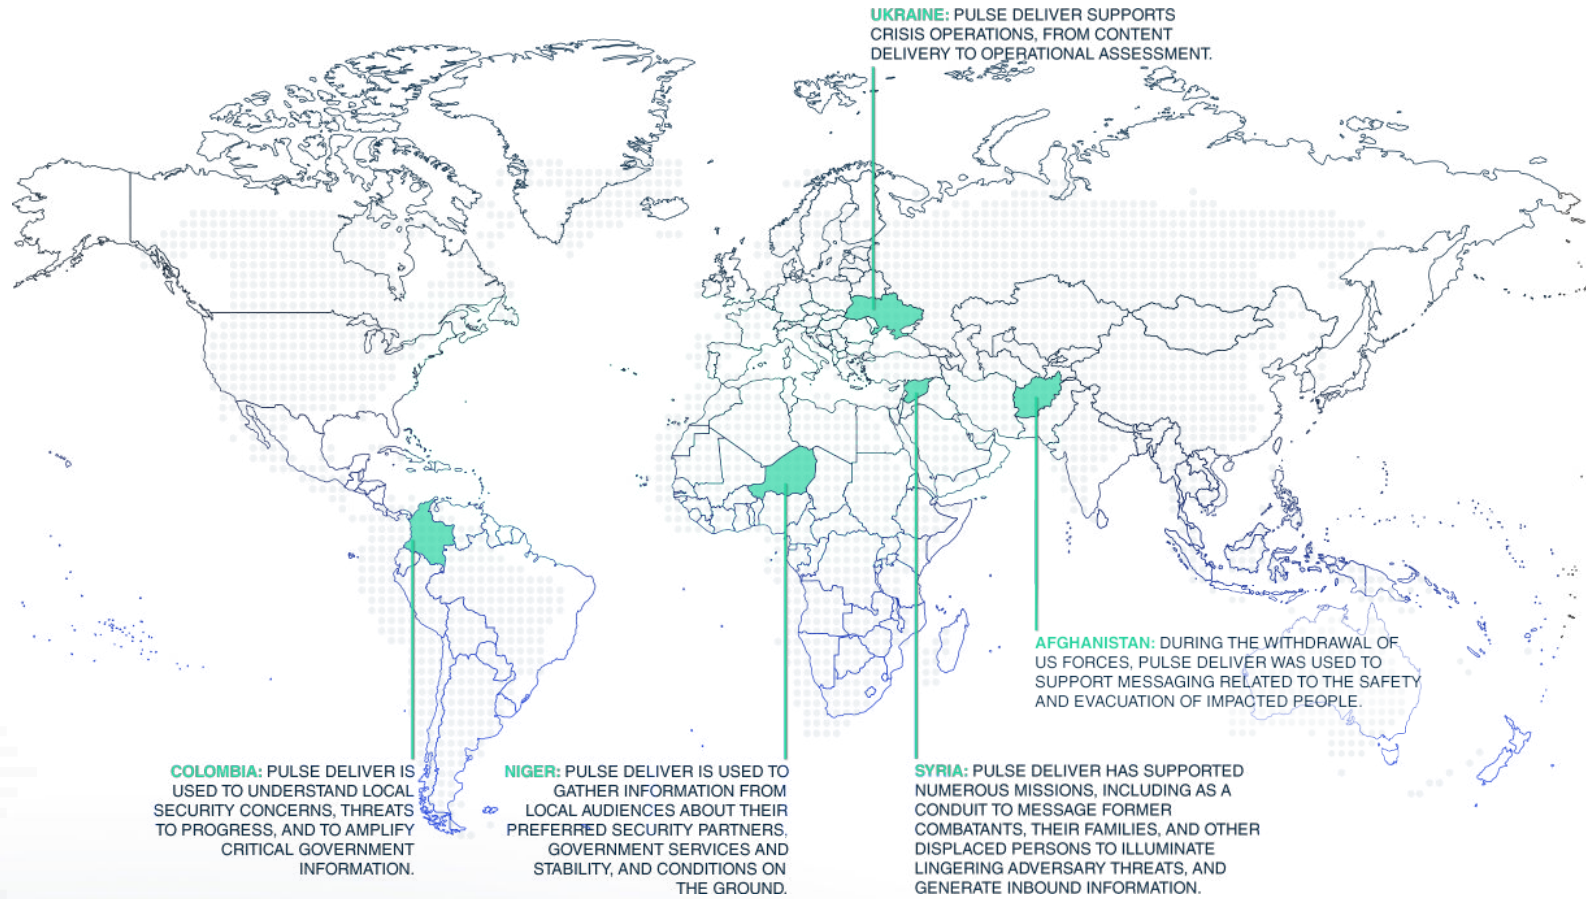

Leading intelligence, defense, government, and commercial organizations rely on Pulse Deliver daily to deliver a strategic and operational advantage.

### Simple Contracting + Licensing Models

Multiple modular subscription models support small teams to large enterprises and allow organizations to get access to the technology they need without buying the things they don't. Two Six can contract at the speed of a MIPR. With more than \$1 billion in total contract ceiling, we offer flexible contract options to enable rapid technical delivery. Our vehicles span the Department of Defense, U.S. Government Agencies, and the Intelligence Community including sole source IDIQs through the Phase III SBIR program, BAAs/OTAs, and R&D.

## Flexibility to Suit Your Needs

Pulse Deliver utilizes Publicly Available Information, which allows for straightforward collaboration and sharing across the U.S. Government and with partners and allies. Additionally, Pulse Deliver is web-accessible, meaning there are no time-intensive approval and installation processes. The platform is easy to navigate, and modular capabilities allow users to integrate Pulse Deliver into existing workflows and tools.
